Professional Summary

Senior AI Engineer with 7+ years of experience building scalable AI, data, and cloud systems. Hands-on experience with LLM-based extraction, RAG-style retrieval, prompt engineering, Azure AI services, and production automation. Strong in Python, SQL, cloud architecture, and end-to-end AI system delivery, with experience mentoring engineers and designing reliable, scalable workflows.

AI Projects

- **Lease Abstraction AI Platform:** OCR + LLM extraction + metadata mapping + Azure Blob/Cosmos DB.
- **Document Chatbot with Azure AI Search:** indexed Blob Storage documents for retrieval-based Q&A.
- **Voice Assistant Prototype:** Whisper STT + GPT-4 for natural language interaction.

Work Experience

▪ Al Rafay Consulting – Karachi

09/2025 – Present

Senior AI Engineer

Responsibilities:

- Architected an AI-powered lease abstraction platform for life sciences REITs, reducing manual review and accelerating acquisition and asset management workflows.
- Designed and implemented a multi-parser pipeline (PDFPlumber, Azure Mistral OCR) with dynamic heading extraction to handle diverse lease formats from biotech and pharma tenants.
- Integrated Azure Mistral and OpenAI for structured extraction, mapping, and metadata, improving abstraction speed and consistency for commercial lease review.
- Designed scalable Azure-based storage (Blob + Cosmos DB) with multi-tenant isolation and folder conventions for scanned and processed documents.
- Implemented streaming uploads, progress reporting, and timing metrics across parsing and abstraction to improve performance monitoring and user feedback.
- Improved reliability with error handling and graceful degradation for non-critical steps in the lease processing pipeline.
- Built an AI powered lease abstraction system using LLMs for structured data extraction from unstructured legal documents, improving processing speed and accuracy.
- Developed NLP pipelines and prompt engineering workflows using OpenAI and Azure Mistral for document understanding and metadata extraction.
- Built a voice assistant prototype using Whisper and GPT for speech to text and conversational AI.
- Designed data validation and monitoring pipelines for AI systems to ensure reliability and performance.

▪ dinCloud – Karachi

07/2021 – 08/2025

Python/AI Engineer

Responsibilities:

- Built a voice assistant prototype using Whisper STT and GPT-4 for conversational response generation.
- Developed prompt templates and LLM workflows to improve response quality and latency.
- Built APIs and cloud-native services for AI feature integration.
- Designed data validation, monitoring, and automation pipelines in Python.
- Designed and optimized end-to-end ELT pipelines to process multi-source data using Python, SQL, and Airflow/DBT workflows.
- Orchestrated data pipelines using Apache Airflow and automated transformations using DBT for modular, testable

data flows.

- Built scalable data models and warehouse schemas in Redshift and PostgreSQL to support analytics dashboards and ad-hoc BI reporting.

▪ **Web Projects Sendirian Berhad (SDN BHD) – Islamabad**

03/2020 – 06/2021

Full Stack Developer

Responsibilities:

- Developing modules, JS applications with ReactJS.
- Developing, debugging and testing back-end APIs.
- Experience in using modern build toolchains and package managers (webpack, npm, and yarn.)
- Experience developing modern responsive web applications with HTML, CSS, Material UI.
- Experience working in agile environments with tools like Git, Bitbucket.
- Contributed actively to daily standups, retrospectives, and sprint planning.

▪ **Vizz Web Solutions – Islamabad**

01/2019 – 02/2020

Data Analyst

Responsibilities:

- Working with REST APIs and scrapping the web to extract data. (Tweepy, Telethon, GoogleNewsAPI)
- Extracted and processed textual data using APIs and web scraping for NLP analysis.
- Conducted sentiment analysis using TextBlob and VaderSentiment to extract insights from unstructured data.
- Performed CRUD operations in MongoDB. (PyMongo)
- Experience in using modern build tool chains and package managers (conda, pip)
- Automated data pipelines and scripts for real-time data ingestion and processing.
- Performed 75% code reduction in prior scripts while converting NodeJS scripts to Python.

Education

- Bachelor of Science in Computer Science COMSATS University Islamabad | 2014 - 2019

Certifications

- Microsoft Certified: Azure AI Engineer Associate (AI-900) | November, 2025
- CS50's Introduction to Artificial Intelligence with Python | Harvard University (edX) | April, 2022
- AI Fundamentals Certification | DataCamp | December, 2021
- Python Code Challenges | LinkedIn Learning | June, 2020
- AI For Everyone | Andrew NG | deeplearning.ai | Coursera | July, 2019
- Coronavirus – What you need to know | Alison | March, 2019
- Using Python to Access Web Data | University of Michigan | Coursera | December, 2018
- Learning How to Learn | McMaster University | Coursera | November, 2018
- The Missing Semester | Zeeshan Usmani | Al Nafi | February, 2018

Skills

- **Programming Languages:** Python, C, C++, Java, Node.js
- **AI / GenAI / LLMs:** OpenAI GPT, Azure OpenAI, Azure Mistral OCR, Whisper STT, Hugging Face Transformers, LangChain, LlamaIndex, prompt engineering, RAG workflows, LLM-based extraction, AI workflow automation
- **Machine Learning / NLP:** Scikit-learn, PyTorch, TensorFlow, Pandas, NumPy, model evaluation, feature engineering, data validation
- **Databases / Vector Stores:** PostgreSQL, MySQL, MongoDB, Redshift, BigQuery, Pinecone, FAISS, Weaviate
- **Data Engineering / Orchestration:** dbt, Airflow, ETL/ELT pipelines, analytics modeling, data quality checks, monitoring pipelines
- **Web / Backend:** FastAPI, Flask, Django, RESTful APIs, WebSockets, gRPC, ReactJS, JavaScript, HTML, CSS
- **Cloud / DevOps:** Azure, AWS, Docker, Kubernetes, CI/CD, Blob Storage, Cosmos DB, cloud deployment
- **Operating Systems:** Windows, macOS, Linux
- **Version Control / Collaboration:** Git, Bitbucket
